

Project Executable Files

Date	03 July 2026
Team ID	XXXXXX
Project Name	OptiCrop – Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

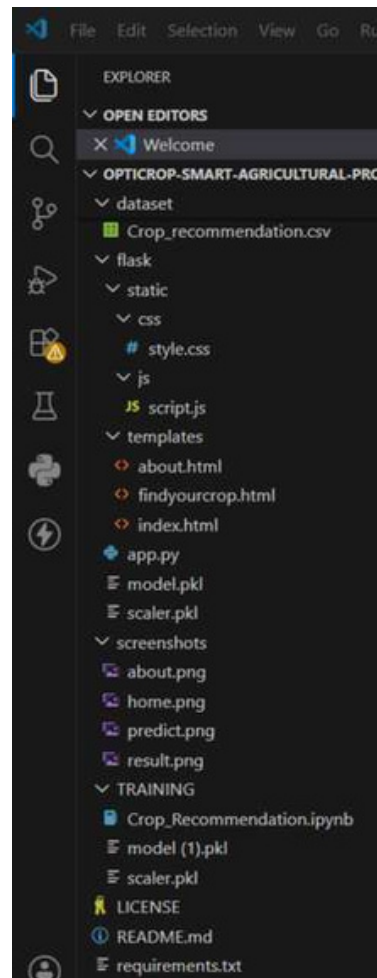

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	No
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	<u>Not Deployed (Runs on Local Flask Server)</u>
Login Credentials (Demo)	Not Applicable (No login required)
Platform / Hosting Provider	Local System (Flask Development Server)
Repository Link	<u>https://github.com/varalakshmivennapusa124-cell/OptiCrop.git</u>
Demo Video Link	<u>https://drive.google.com/file/d/1OGnMy6913V6iM1gPqSgAkWpBkBfA6oS/view?usp=sharing</u>

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Install Python 3.x, Node.js, npm, Visual Studio Code, Git, and the required project dependencies. Ensure that an internet connection is available for accessing the deployed application or downloading the necessary packages.

Installation Steps:

Step 1: Clone the GitHub repository.

`https://github.com/varalakshmivennapusa124-cell/OptiCrop.git`

Step 2: Navigate to the project folder.
`cd OptiCrop`

Step 3: Install the required dependencies.
`pip install -r requirements.txt`

Step 4: Run the Flask application.
`python app.py`

Step 5: Open your browser and visit: `http://127.0.0.1:5000`

Step 5: Known Issues / Limitations

S. No	Known Issue / Limitation	Workaround / Status
1	The application uses a trained dataset and does not use real-time weather or soil sensor data.	Planned to integrate live weather APIs and IoT-based soil sensors in future versions.
2	Crop recommendations depend on the quality and accuracy of the input values provided by the user.	Users should enter correct soil test values to obtain accurate recommendations.
3	The current version focuses only on crop recommendation and crop suitability analysis.	Future updates will include fertilizer recommendation, crop disease prediction, and yield estimation.
